[170530 NFB Area2 PP Excavation.pdf](#)

Hi Frank:

How is everything? Attached is a figure which gives info from our recent assessment. We are going to estimate a 2 foot depth for all of Area 2. Patrick gave the estimates exactly to the point where we observed slag or obtained elevated readings. Basically, 18 inches was the deepest. We will go beyond that for “clean fill” and to ensure we meet our cleanup values. So can you determine 2 feet for the area and give me a cost estimate to perform the excavation of that area, temporarily staging of the material, backfill and asphalt of Area 2? The sooner I get the cost estimate to Joe, the sooner we will know if we have money to come back in July.

Thanks
